◈ TRADEX NEWSROOM

MULTI-AGENT INTELLIGENCE PLATFORM — USER GUIDE v1.0

01 — WHAT IS THIS?

The **TRADEX NEWSROOM** is a visual AI operations center that shows you what **7 specialized trading agents** are currently analyzing about the market — in real time. Think of it as a war room where each agent is a specialist sitting at their desk, studying a different aspect of the market and reporting their conclusion.

It is **not a chart** — it is a **consensus dashboard**. The goal is to give you a single glance at the overall market picture across trend, price action, risk, news, and execution readiness.

---

02 — THE 7 AGENTS

Each agent sits at a desk in the newsroom. Their desk monitor glows in their status color.

- **TREND**
  Higher Timeframe Bias. Reads the big picture — is price in an uptrend or downtrend on the daily/weekly? This is the foundation. If TREND is BULLISH, the market overall favors long positions.

- **PR.ACTION**
  Price Action / SMC Analyst. Looks for Break of Structure (BOS), liquidity sweeps, order blocks, and fair value gaps. When it says ALERT, it has spotted a key structural move happening right now.

- **MASTER**
  Coordinator / Decision Maker. The boss. It listens to all 6 other agents, weighs their signals, and produces the final verdict. If MASTER says NO TRADE, there is no clear setup even if some agents are bullish. If it says ARMED, a setup is forming.

- **RISK GATE**
  Risk Validator. Checks if conditions are safe to trade — spread, volatility, session timing, news risk. If it shows VALID, risk conditions are acceptable. If BLOCKED, do not trade regardless of what other agents say.

CONTRARIAN

Devil's Advocate. Actively looks for reasons *not* to trade — overextension, divergence, fake breakouts. When it's MONITORING, it's watching but not blocking. If it goes ALERT, reconsider your bias.

NEWS

Macro & News Monitor. Tracks scheduled economic events (NFP, CPI, FOMC) and breaking news that could move the market. MONITORING = no major event imminent. ALERT = high-impact event approaching, be careful.

EXECUTION

Trade Execution Readiness. The last check before a trade. ARMED means all pre-conditions for entry are met and the system is ready to execute. STANDBY means waiting for a trigger. It only fires after all other agents give the green light.

---

03 – AGENT STATUS COLORS

Each agent's desk glows in their current status color. Here is what each color means:

GREEN — Bullish / Valid

Agent sees a positive, go-ahead signal. Market structure or conditions favor a trade in the bullish direction.

AMBER — Alert / Caution

Something notable is happening. A key level has been hit, a sweep occurred, or a news event is near. Pay attention.

CYAN — Armed / No-Trade

Armed: ready to execute. **No-Trade:** conditions do not support a trade right now — wait.

PURPLE — Monitoring

Agent is watching but has no strong signal yet. Neutral state — not blocking, not confirming.

RED — Bearish / Blocked

Either bearish bias detected, or Risk Gate is blocking all trades. If Risk Gate goes red, do NOT enter a trade.

GREY — Idle / Offline

Agent has not run yet or has no data. Run the pipeline to activate it.

---

04 — THE WALL MONITORS

The three large screens on the back wall of the newsroom each show a different data layer:

◆ MARKET INTELLIGENCE

A global market structure map. Shows broad regional market zones and key signal pings — green for bullish zones, amber for contested areas, purple for bearish zones.

◈ TRADEX — AGENT CONSENSUS

The centerpiece. Shows a live bar chart for each of the 7 agents. The height of each bar = the agent's current conviction level (0–100%). Taller bar = stronger signal. Colors match each agent's status. This is the heartbeat of the system.

◆ AGENT STATUS BOARD

A real-time list of all 7 agents with their name and current status label (BULLISH, ALERT, ARMED, etc). Gives you the fastest possible read at a glance.

---

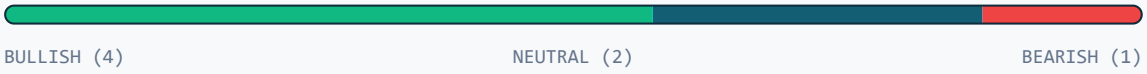
05 — THE CONSENSUS SCORE

At the bottom of the newsroom you will see a CONSENSUS reading. This is calculated by counting agent votes:

- **BULLISH votes** — agents in state: Bullish, Valid, Armed
- **NEUTRAL votes** — agents in state: Monitoring, No-Trade, Idle
- **BEARISH votes** — agents in state: Bearish, Blocked

Example: 4B · 2N · 1R means 4 agents bullish, 2 neutral, 1 bearish → overall BULLISH consensus.

The consensus is displayed as: **BULLISH** / **NEUTRAL** / **BEARISH**



---

06 — HOW TO USE IT (STEP BY STEP)

1. Open the Brain / AI Analysis page in TRADEX Terminal. The Newsroom is displayed at the top of this section.
2. Click "RUN PIPELINE" (top right of the Newsroom). This triggers all 7 agents to analyze the current market for your selected symbol and timeframe. Wait 3–5 seconds for results.

3 **Read the CONSENSUS** at the bottom strip first. Is it BULLISH, BEARISH, or NEUTRAL? This gives you the macro picture in one word.

4 **Check the RISK GATE agent.** If it is RED (BLOCKED), stop here — do not trade, regardless of what other agents say. Risk conditions are not met.

5 **Check the MASTER agent.** If it says NO-TRADE or is CYAN, there is no confirmed setup yet. If it says ARMED or BULLISH/BEARISH, a setup is active.

6 **Check TREND and PR.ACTION.** These confirm the directional bias. TREND = big picture, PR.ACTION = immediate price structure. Both should agree for a high-conviction trade.

7 **Check NEWS and CONTRARIAN.** If NEWS is ALERT, there is a high-impact event nearby — be cautious. If CONTRARIAN is ALERT, the market may be overextended — reduce size or wait.

8 **EXECUTION = ARMED?** If yes, and all the above checks pass, you have a high-probability setup. Proceed to your chart for exact entry.

---

07 — QUICK REFERENCE: WHAT TO DO

SCENARIO	ACTION
RISK GATE = RED (Blocked)	**DO NOT TRADE. Close the chart.**
CONSENSUS = NEUTRAL, MASTER = NO-TRADE	**WAIT.** Market has no clear direction. Stand aside.
CONSENSUS = BULLISH, MASTER = ARMED, EXECUTION = ARMED	**HIGH CONVICTION LONG SETUP.** Go to chart, look for entry.
TREND = BULLISH but PR.ACTION = ALERT	**CAUTION.** Trend is up but price is at a key level — wait for confirmation.
NEWS = ALERT	**HIGH-IMPACT EVENT NEAR.** Reduce position size or wait for the event to pass.
CONTRARIAN = ALERT while others are BULLISH	**POSSIBLE OVEREXTENSION.** Be skeptical of new longs. Tighten stops.
All 7 agents = same color	**FULL CONSENSUS.** Highest probability setup. Rare — take it seriously.

08 — HOW THE PIPELINE FLOWS

When you press **RUN PIPELINE**, the agents run in this order:

TREND → PR.ACTION → NEWS → RISK GATE → CONTRARIAN → MASTER → EXECUTION

Each agent passes its findings to the next. MASTER reads all 6 inputs before deciding. EXECUTION only activates if MASTER approves. This flow prevents false signals from individual agents triggering premature trades.

09 — GLOSSARY

BOS — BREAK OF STRUCTURE

SMC — SMART MONEY CONCEPTS

Price breaks a recent swing high (bullish BOS) or swing low (bearish BOS). Signals a shift in market direction.

A framework analyzing how institutional traders (banks, funds) move price — order blocks, fair value gaps, liquidity sweeps.

LIQUIDITY SWEEP

Price briefly breaks a key level to grab stop-loss orders from retail traders, then reverses. Often precedes a strong move.

HTF BIAS

Higher Timeframe Bias — the dominant directional trend on daily/weekly charts. It filters out lower-timeframe noise.

ORDER BLOCK

A price area where large institutional orders were placed. Price often returns to these zones, making them key support/resistance.

PIPELINE

The sequence of all 7 agents running in order, each feeding results to the next, ending with a final MASTER decision.
