TRADEX NEWSROOM

MULTI-AGENT INTELLIGENCE PLATFORM — USER GUIDE v1.0

01 — WHAT IS THIS?

The **TRADEX NEWSROOM** is a visual AI operations center showing what **7 specialized trading agents** are currently concluding about the market — in real time.

It is **not a chart**. It is a **consensus dashboard** — a single glance at the overall market picture across trend, price action, risk, news, and execution readiness.

02 — THE 7 AGENTS

TREND	**Higher Timeframe Bias.** Reads the big picture — is price in an uptrend or downtrend on the daily/weekly? This is the foundation of every trade decision.
PR.ACTION	**Price Action Analyst.** Looks for Break of Structure (BOS), liquidity sweeps, order blocks, and fair value gaps. When it says **ALERT**, a key structural move is happening right now.
MASTER	**Coordinator / Decision Maker.** The boss. Listens to all 6 other agents and produces the final verdict. If it says **NO TRADE**, there is no setup. If it says **ARMED**, a setup is forming.
RISK GATE	**Risk Validator.** Checks spread, volatility, session timing, and news risk. If it shows BLOCKED — do not trade regardless of what other agents say.
CONTRARIAN	**Devil's Advocate.** Looks for reasons not to trade — overextension, divergence, fake breakouts. If it goes **ALERT** while others are bullish, reconsider.
NEWS	**Macro & News Monitor.** Tracks high-impact economic events (NFP, CPI, FOMC). **ALERT** = major event approaching — reduce size or wait.
EXECUTION	**Trade Readiness.** The final check. **ARMED** means all pre-conditions are met and the system is ready to execute. Only activates after MASTER approves.

03 — STATUS COLORS

GREEN – BULLISH / VALID

Positive signal. Conditions favor a trade in the bullish direction.

AMBER – ALERT

Something notable is happening. Key level hit, sweep occurred, or news nearby.

CYAN – ARMED / NO-TRADE

Armed: ready to execute. **No-Trade:** no clear setup — wait.

PURPLE – MONITORING

Watching but no strong signal. Neutral — not blocking, not confirming.

RED – BEARISH / BLOCKED

Bearish bias or Risk Gate blocking all trades. Do not enter if Risk Gate is red.

GREY – IDLE

Agent has not run yet. Press RUN PIPELINE to activate.

04 – HOW TO USE IT

1. Click **RUN PIPELINE** (top right of the Newsroom). Wait 3–5 seconds for all agents to finish.
2. Read the **CONSENSUS** at the bottom — BULLISH, BEARISH, or NEUTRAL. This is the overall market picture.
3. Check **RISK GATE** first. If it is **RED / BLOCKED** — stop. Do not trade.
4. Check **MASTER**. NO-TRADE = wait. ARMED or BULLISH/BEARISH = setup is active.
5. Check **TREND** and **PR.ACTION** — both should agree for a high-conviction trade.
6. Check **NEWS** — if ALERT, a high-impact event is near. Reduce size or wait for it to pass.
7. If **EXECUTION = ARMED** and all checks pass — go to your chart and look for the entry.

05 – CONSENSUS SCORE

Agent votes are counted by state:

BULLISH votes — Bullish, Valid, Armed · **NEUTRAL** — Monitoring, No-Trade, Idle · **BEARISH** — Bearish, Blocked

Example above → overall **BULLISH** consensus (4B · 2N · 1R)

06 – PIPELINE FLOW

Agents run in this order. Each feeds results to the next:

TREND → PR.ACTION → NEWS → RISK GATE → CONTRARIAN → MASTER → EXECUTION

MASTER reads all 6 inputs before deciding. EXECUTION only activates if MASTER approves. This prevents false signals from individual agents triggering premature trades.

07 – QUICK REFERENCE

SCENARIO	ACTION
RISK GATE = RED (Blocked)	**Do not trade. Close the chart.**
MASTER = NO-TRADE, CONSENSUS = NEUTRAL	**Wait.** No clear direction. Stand aside.
CONSENSUS = BULLISH, MASTER = ARMED, EXECUTION = ARMED	**High-conviction long setup.** Go to chart, find entry.
TREND bullish but PR.ACTION = ALERT	**Caution.** Price at key level — wait for confirmation.
NEWS = ALERT	**High-impact event near.** Reduce size or wait.
CONTRARIAN = ALERT while others bullish	**Possible overextension.** Tighten stops, reduce size.
All 7 agents = same color	**Full consensus.** Highest probability setup — take it seriously.

08 — GLOSSARY

BOS — BREAK OF STRUCTURE

Price breaks a recent swing high (bullish) or swing low (bearish). Signals a shift in market direction.

LIQUIDITY SWEEP

Price briefly breaks a key level to grab stop-loss orders from retail traders, then reverses sharply.

HTF BIAS

Higher Timeframe Bias — the dominant trend on daily/weekly charts. Filters out lower-timeframe noise.

ORDER BLOCK

A price area where large institutional orders were placed. Price often returns to these zones as key support/resistance.

FAIR VALUE GAP (FVG)

An imbalance in price where one candle gaps past two others. Price tends to return to fill this gap.

PIPELINE

The sequence of all 7 agents running in order, each feeding results to the next, ending at MASTER → EXECUTION.
